

PRESS RELEASE MDW2025

NEW FOR 2025:

Lualdi presents Framework, the advanced boiserie that redefines contemporary spaces

Framework - Boiserie

Framework is Lualdi's innovative boiserie system that transforms walls into dynamic, multifunctional elements, redefining the concept of spatial division. Thanks to the technology of its new frame, Framework allows for the configuration of highly customisable solutions, meeting the design needs of architects and interior designers with versatility.

Designed to accommodate functional elements such as **shelves, drawers, open compartments, hanging rails, and LED bars**, and to integrate with **hinged or sliding doors**, the Framework boiserie provides great compositional freedom, creating walk-in wardrobes, workspaces, bookcases, and bespoke configurations, perfect for ever-evolving environments.

The Framework system includes a new 60mm-thick door model and a dedicated aluminium frame. Thanks to these characteristics, the door ensures a high degree of customisation, offering the option to apply different finishes on each side, and a technological advancement that improves its acoustic performance.

The system's modularity also allows for a wide range of materials, including **wood, glass, aluminium, and potentially porcelain stoneware or fabrics**, offering a perfect integration between architecture and interior design.

Lualdi's approach with Framework is based on a synthesis of technology and aesthetic research, offering a refined and contemporary design language.

The doors can be enhanced with handles and frames designed to elevate the overall aesthetic, while the partitions integrate lighting systems and interior solutions, striking the perfect balance between form and function.

Thanks to its versatility, Framework is the ideal solution for both residential and contract projects, offering fresh perspectives to design contemporary spaces. With this innovation, Lualdi reaffirms

its leading role in Made in Italy design, positioning itself at the forefront of advanced architectural solutions.

Wall&Door – Mobile partition system

The evolution of the *Wall&Door* system brings significant technical updates: a **60mm** thickness, greater compatibility with different door types (hinged and sliding), and the possibility of integration with the new Framework boiserie. This allows for the creation of **dynamic, reconfigurable spaces** with perfect aesthetic and functional continuity.

Koan – Sliding system with vertical slats

Designed by *Kokaistudios*, the *Koan* system officially joins the 2025 catalogue with a new configuration featuring **vertical wooden slats of equal length**, extending across the full height of the glass doors. Its minimalist design emphasises the balance between transparency and materiality, creating plays of light and reflection.

Ring – Handle – Designed by Atelier Gulla Jonsdottir

The handle is the first interaction with a living space – a detail capable of transforming an automatic gesture into an experience that combines beauty and functionality.

Born from a collaboration with Atelier Gulla Jonsdottir, this new sculptural handle conveys the studio's design essence, known for its dynamic use of curved and sensual shapes.

An object that goes beyond mere function, turning into a statement, a tactile experience, a sculptural piece merging design and personal expression.

Shoin – System for bathroom & shower spaces

Shoin, designed by **Dante Bonuccelli**, evolves into a new system for partitioning bathroom and shower spaces. A flexible system featuring fixed, hinged, or pivot doors, suitable for any home environment. Its technological update includes new sealing systems, enabling the creation of high-performance shower enclosures and bathroom spaces in terms of functionality and style.

New glass finishes: Retina Nera and Retina Argento

LUALDI company profile

Lualdi is a historic name in Italian design, specialising in interior doors, bespoke furniture, and contract solutions. Founded in 1859 as an artisanal carpentry workshop, it is now in its fifth generation of family leadership. The shift to industrial production began in the 1960s through collaborations with some of the top architects in the Milanese scene of the time. Today, the company works with some of the world's most important architects, with showrooms in Milan, London, Los Angeles, New York, and Miami, and its leadership is recognised internationally.
